

Name _____

Apples and Bananas

Count out 24 red and yellow (or two different colored) counters, with 16 of them showing red (apples) and 8 of them showing yellow (bananas). The 24 counters make up your whole basket of fruit.

Group the apples and bananas in same-sized groups and give the fractions that describe the number of apple groups and number of banana groups. Find as many ways as you can. Draw each solution below.
